

1. Turn over the battery case, there are eight screws here. Loosen them and open the case.

2. Find the screw of the handle, and loosen the screws, take out the handle, exchange a new one on it.

3. Please note there is a slight angle of the handle. Please assemble the right direction as picture shows.

4. It is very easy to disassemble the battery case. When you need to assemble the battery case, please note you shall lock the left and right screws on the both side first. And then lock the four screws on the behind.

5. Finally, be careful with the front two screws. You must tighten them with your hands and then lock them, otherwise the threads may be damaged by mismatching.
